SUMMARY

Computer Science graduate with hands-on experience in Machine Learning, Generative AI, RAG, NLP, and full-stack development. Skilled in building AI-powered applications using Python, LLMs, semantic search, and modern web technologies.

EDUCATION

Kalinga Institute of Industrial Technology

2022 – 2026

Bachelor of Technology in Computer Science and Engineering

CGPA - 8.88

PROJECTS

ElyvnAI – AI Interview & Resume Assistant

React, Tailwind, FastAPI, PostgreSQL, Neon DB, Gemini API, LLMs

- Built a full-stack AI interview platform using React, FastAPI, PostgreSQL, and Gemini API for automated resume analysis, ATS scoring, adaptive mock interviews, and performance reporting.
- Engineered LLM-driven pipelines for resume parsing, role-specific interview question generation, answer evaluation, and final report generation using structured prompts and contextual conversation history.
- Designed an adaptive interview workflow that uses candidate resume context and previous responses to generate follow-up questions, evaluate technical and communication skills, and provide personalized improvement recommendations.

AI-Powered Tax Clause Chatbot

Python, Streamlit, NLP, OCR, Sentence Transformers, HuggingFace, FAISS

- Built a Streamlit chatbot that processed a 400+ page Indian Income Tax Bill, enabling queries across 1,200+ legal clauses with responses in under 2 seconds.
- Improved clause retrieval accuracy using semantic embeddings (Sentence-Transformers, scikit-learn) and reduced user reading time by 50% through NLP summarization.
- Integrated source attribution (chapter & page references) to ensure trust and legal traceability.

Fake Job Prediction Model

Python, Scikit-Learn, NLTK, Pandas, Matplotlib

- Built a model that processed 17,000 job postings from Kaggle, combining text and metadata to predict fraudulent listings using TF-IDF vectorization and SMOTE for class balancing.
- Trained and evaluated multiple classifiers – Naive Bayes, Random Forest, XGBoost, and SVM, achieving strong performance in accuracy, precision, recall, F1-score, ROC curves, and confusion matrices.
- Achieved 89% accuracy in detecting fraudulent job postings, improving security in online job markets.

SKILLS

Languages: C++, Python, JavaScript, HTML, CSS

AI & GenAI: Machine Learning, Deep Learning, NLP, Generative AI, RAG, Agentic AI, LangChain, LangGraph, TensorFlow

Web Development: React.js, Tailwind CSS, Node.js, Express.js, FastAPI, Pydantic

Databases & Tools: PostgreSQL, MongoDB, GitHub, VS Code, Linux, Jupyter Notebook

CERTIFICATIONS

- Python Full Stack Development
- FASTAPI with GenAI and AgenticAI
- Machine learning
- Data Science
- Generative AI
